

## GREYWATER FACT SHEET 5

# MAINTENANCE OF GREYWATER DIVERSION DEVICES AND TREATMENT SYSTEMS

## GREYWATER DIVERSION DEVICES

Once a greywater diversion device is installed it is the owner's responsibility to ensure it is maintained for the life of the installation. Greywater diversion devices and their associated sub-surface irrigation distribution systems require regular maintenance, such as cleaning and replacing of filters and periodic de-sludging of the surge tank, regular periodic inspection of the subsurface distribution system, and soil condition evaluation.

Greywater Diversion Device Component	Maintenance Required	Frequency
<b>Filter</b>	Clean filter <ul style="list-style-type: none"> <li>filter should be removed and cleaned, removing physical contaminants (sand, lint, hair, etc)</li> </ul>	Weekly
	Replace Filter	As recommended by the manufacturer or as required (usually every 6-12 months)
<b>Surge tank</b>	Clean out sludge from surge tank	Every 6 months
<b>Sub-surface irrigation distribution system</b>	Check that water is dispersing <ul style="list-style-type: none"> <li>regularly monitor soil to ensure all areas are wet after an irrigation period</li> </ul>	Weekly
<b>Soil condition</b>	Check that soil is healthy. Signs of unhealthy soil include: <ul style="list-style-type: none"> <li>damp and boggy ground hours after irrigation</li> <li>surface ponding and run-off of irrigated water</li> <li>poor vegetation growth</li> <li>unusual odours</li> <li>clumping of soil</li> <li>fine sheet of clay covering surface</li> </ul>	Monthly
<b>Sensor probe (if applicable)</b>	Clean sensor to ensure correct readings and therefore pump operation	Weekly

This maintenance work itself has inherent health risks, just like managing a worm farm or compost bin. Rubber gloves and a mask should be worn and thorough washing of hands and clothes should take place immediately afterwards.

## **GREYWATER TREATMENT SYSTEMS**

Once a greywater treatment system is installed it is the owner's responsibility to ensure it is maintained for the life of the installation. The maintenance procedures provided by the manufacturer, and any conditions of approval from the council, must be carried out as specified.

The NSW Health issued certificate of accreditation for the greywater treatment system may include specific maintenance requirements for the system.
